CSE 3422: PROJECT PROPOSAL GUIDELINES

GENERAL GUIDELINES:

1. Each team must prepare a slide to present its proposed project.
2. The presentation must be delivered in English.
3. Every team member must present a specific portion of the proposal.
4. Each team member must clearly explain their assigned role and expected contribution to the project.
5. The proposal presentation will contribute to the overall course grade. All team members should be present and prepared.
6. All team members must be present and participate in the presentation. Absence or failure to present may result in a deduction of marks.
7. Presentation time limit: 8–10 minutes per team.
8. Presentation time must be distributed fairly among team members.
9. Slides should be clear, concise, well-organized, and visually appealing. Avoid excessive text.
10. Any external information, statistics, or research findings used in the presentation must be supported by credible sources.

PRESENTATION CONTENT GUIDELINES:

Your slide should contain the following content:

1. Project Motivation

- Why have you selected this project?
- What problem does the project aim to solve?
- Why is solving this problem important?

2. Project Objectives and Scope

- What are the main objectives of the project?
- Who are the target users?
- What are the major functionalities within the scope of the project?
- What aspects are outside the scope of the proposed project, if applicable?

3. Technology Stack Analysis

Conduct research on the popularity and adoption of relevant technologies in different popular regions, such as the **USA, Europe, Japan, China, Australia** and lastly **Bangladesh**, where reliable information is available. Your analysis should cover the following categories:

1. Frontend framework/library
2. Backend framework
3. Database technology
4. Security framework or authentication solution
5. UI/UX design tool
6. Version control and project management tools
7. Testing tool/framework
8. Test Automation Tools
9. Software Maintenance Tools

For each category, identify relevant technologies and compare their adoption or popularity using credible sources, surveys, industry reports, or other relevant evidence. Provide statistics, names and diagrams to show your research. Clearly mention the sources used.

4. Selected Technologies and Justification

- Identify the frameworks, tools, and technologies selected for your project.
- Explain why you selected each technology.
- Justify your choices based on factors such as project requirements, ease of development, scalability, security, team familiarity, and integration. Your choices should be supported by valid reasons rather than personal preference alone.

5. Project Features and Functionalities

- Describe the proposed system and how it will work.
- Identify the major features and functionalities.
- Explain the purpose of each major feature and how it addresses the problem identified.
- Highlight any planned external API integration, if applicable.

6. Team Roles and Responsibilities

- Identify each team member and their assigned role.
- Explain each member's expected responsibilities and contribution.
- Show how the team will divide the development work and collaborate throughout the project.

7. References

- Include the sources used for technology-stack research, statistics, and other external information.
- Use credible and verifiable sources.
